

6 (b)

Aim :- To configure routers using rip protocol

Circuit :-

Steps :-

To configure RIP protocol

click on router 1 → enable → config terminal

router rip

network 10.0.0.0

network 20.0.0.0

exit

For router 2

same commands

except

network 20.0.0.0

network 30.0.0.0

For router 3

network 30.0.0.0

network 40.0.0.0

To check if router is collecting routing info  
command :- show ip route

learnings:-

RIP - routing information protocol

we use RIP to config routers

It is a distance vector routing protocol which knows only neighbours. It doesn't know entire topology.

It doesn't support classless network (CIDR). It sends routing table to neighbour.

PPP - point to point protocol. for serial clock connections

encapsulation ppp for serial interfaces only  
clock rate only for clock interfaces

To ~~config~~
